

# Hatton Horse Floats

**L**yn and the team at Hatton Horse Floats have been servicing the demand for good quality horse floats for over ten years. The range of horse floats offer safety for your horse and comfort for the competing rider. Lyn and his team of nine come with combined years of experience in engineering, designing, painting, panel building and mechanical expertise.

Lyn and his wife Sharon are both horse-lovers. Sharon competes nationally in dressage and Lyn professes over forty years of horse experience, hunting regularly. The floats are designed with the horse in mind. With not a single rivet left un-padded, you can be confident that your horse will be traveling in something safe, sturdy, reliable and practical. Lyn and Sharon have always had a mission to design and manufacture the finest in horse travel with Lyn simply designing what 'what we wanted as horse people'. Currently five models are being built, each offering more space and optional extras. A three-horse float

is also available; an ideal alternative for those not wanting to purchase a truck.

The range of Hatton Horse Floats comes with extremely strong eight inch by two inch (two hundred millimetres by fifty millimetres) timber flooring and a

one piece chassis, adding strength and durability. Upon doing a bit of research Lyn found that fibre glass has little strength to it and as such has opted for a rib-constructed steel roof. Smooth, effective disc breaks make it a far safer float if brakes do have to be quickly administered. Lyn and his team are constantly looking at better ways to decrease float movement to make it a far more enjoyable ride for your equine friend.

If you are currently looking for a horse float that boasts safety, security, practicability and strength, Lyn will be happy to meet your horse needs. He can be contacted on 03 578 3125 or visit the website at [www.hattonfloats.co.nz](http://www.hattonfloats.co.nz).
